

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please AMEND claims in accordance with the following:

1. (CURRENTLY AMENDED) A portable apparatus, comprising:
 - a managing part configured to manage one or more application programs stored in the portable apparatus usable by a particular user in a manner linked to a plurality of using situations of the portable apparatus usable by the particular user;
 - a switch configured to set a using situation of the portable apparatus ~~usable by the particular user to one of a plurality of modes usable by the user responsive~~ subsequent to detection of said using situation based on a current use during implementation of said using situation pertaining to said one or more application programs; and
 - a control part configured to automatically identify and select, based on said set using situation, an application from among ~~said one or more application programs~~ stored in the portable apparatus having a high possibility of use ~~from the managing part~~, and to make the selected application program ~~usable~~ available for use by the particular user.
2. (CANCELLED)
3. (PREVIOUSLY PRESENTED) The portable apparatus as claimed in claim 1, wherein said control part determines an accounting destination depending on whether the using situation is a business mode for business use or a private mode for personal use.
4. (PREVIOUSLY PRESENTED) The portable apparatus as claimed in claim 1, further comprising:
 - a display part,
 - said control part displaying the automatically selected application program on the display part in a manner usable by the particular user.

5. (PREVIOUSLY PRESENTED) The portable apparatus as claimed in claim 1, wherein said managing part manages the linked application programs as a database, and automatically adds to the database data which depend on the using situation and are not included in the database.

6. (CURRENTLY AMENDED) A portable apparatus, comprising:
a managing part configured to manage one or more application programs stored in the portable apparatus usable by the particular user in a manner linked to a plurality of using situations of the portable apparatus usable by the particular user;
a detector configured to detect a using situation of the portable apparatus ~~usable by the particular user~~ based on information selected from at least one of an electronic mail address of another party ~~in~~ during implementation of a mail reception or transmission and a telephone number of another party ~~in~~ during a telephone reception or transmission; and
a control part configured to automatically identify and select, based on said detected using situation, one application program from among one or more application programs stored in the portable apparatus usable by the particular user from the managing part, and to make the selected application program ~~usable~~ available for use by the particular user, and
where personal information other than that of said particular user is extracted based upon at least one of said electronic mail address of the other party and said telephone number of the other party, and the selected application program is selected from one or more application programs related to said extracted personal information.

7-14. (CANCELLED)

15. (PREVIOUSLY PRESENTED) The portable apparatus as claimed in claim 6, wherein said control part determines an accounting destination depending on whether the using situation is a business mode for business use or a private mode for personal use.

16. (PREVIOUSLY PRESENTED) The portable apparatus as claimed in claim 6, further comprising:
a display part, and
said control part displaying the automatically selected application program on the display part in a manner usable by the particular user.

17. (PREVIOUSLY PRESENTED) The portable apparatus as claimed in claim 6, wherein said managing part manages the linked application program as a database, and automatically adds to the database data which depend on the using situation and are not included in the database.

18. (CURRENTLY AMENDED) A computer-readable storage medium which stores a program for causing a computer to operate as a portable information terminal equipment usable by a particular user, said program comprising:

managing one or more application programs stored in the portable information terminal equipment usable by the particular user in a manner linked to a plurality of using situations of the portable information terminal equipment usable by the particular user; and

automatically identifying and selecting, based on said using situations, an application program from among said one or more application programs stored in the portable information terminal equipment having a high possibility of use ~~that are~~ subsequent to detection of said using situations, where said application programs are managed by-based on the managing and ~~related to~~ one of a plurality of modes usable by the user as identified by a switch, and making the selected application program ~~usable~~ available for use by the particular user.

19. (CURRENTLY AMENDED) A computer-readable storage medium which stores a program for causing a computer to operate as a portable information terminal equipment usable by a particular user, said program comprising:

managing one or more application programs stored in the portable information terminal equipment usable by the particular user in a manner linked to a plurality of using situations of the portable information terminal equipment usable by the particular user;

detecting a using situation of the portable information terminal equipment ~~usable by the particular user~~ based on information selected from a group consisting of an electronic mail address of another party ~~in~~ during implementation of a mail reception or transmission and during implementation of a telephone number of another party in a telephone reception or transmission; and

automatically identifying and selecting, based on said detected using situation, an application program from among one or more application programs stored in the portable information terminal equipment ~~that are managed by the managing~~, and making the selected

application program ~~usable~~ available for use by the particular user, and

where personal information other than that of said particular user is extracted based upon at least one of said electronic mail address of the other party and said telephone number of the other party, and the selected application program is selected from one or more application programs related to said extracted personal information.

20. (CANCELLED)

21. (CURRENTLY AMENDED) A portable apparatus, comprising:

a managing unit managing at least one of application programs stored in the portable apparatus ~~usable~~ by a particular user based on using situations of the portable apparatus ~~usable~~ by the particular user;

a timer tracking time of day;

a switch indicating one of a business mode for business use and a private mode for personal use, of the portable apparatus ~~usable~~ while being implemented by the particular user, based on the time of day; and

a control unit automatically identifying and selecting, based on said indicating, at least one of the application programs stored in the portable apparatus ~~usable by the particular user from the managing unit~~ corresponding to said business mode and said private mode, ~~and said indicating by the switch based on the time of day~~, and making the selected application program ~~usable~~ available for use by the particular user.

22. (PREVIOUSLY PRESENTED) The portable apparatus as claimed in claim 21, wherein only application programs related to business are usable by the particular user when the business mode is indicated.

23. (PREVIOUSLY PRESENTED) The portable apparatus as claimed in claim 21, wherein only information related to business is displayed when the business mode is indicated.

24. (PREVIOUSLY PRESENTED) The portable apparatus as claimed in claim 21, wherein the information includes telephone numbers, and the functions include dialing one of the telephone numbers.

25. (PREVIOUSLY PRESENTED) The portable apparatus as claimed in claim 6, wherein the detector detects the using situation to be a business mode when the position information is determined to be within a business zone.

26. (PREVIOUSLY PRESENTED) The portable apparatus as claimed in claim 21, further comprising:
a mobile telephone including the managing unit, the switch and the control unit.

27. (CURRENTLY AMENDED) A method of selecting one or more application programs of a terminal, comprising:

classifying uses executed using the terminal into a first operation mode and a second operation mode ~~while the uses are being executed~~, each of the uses being classified in accordance with a possibility of occurrence corresponding to each of the uses;

controlling the terminal to switch between the first operation mode ~~when~~ during transmission of a first data is transmitted using the terminal and the second operation mode ~~when~~ during transmission of a second data is transmitted using the terminal based on said classifying ~~and a set use as identified by said switch~~; and

automatically providing an application program stored in the terminal based on the first or second operation mode subsequent to which the terminal is controlled to switch ~~said controlling and providing the application program as having a highest possibility of use among application programs stored in the terminal.~~

28. (CURRENTLY AMENDED) A method of selecting one or more application programs of a terminal, comprising:

detecting a current use of the terminal based on a type of information exchanged via the terminal based on a use corresponding to said type of information as set by a switch subsequent to said detecting; and

automatically providing an application program stored in the terminal, based on said use set, that has a high possibility of use among application programs of the terminal based on the detected current use of the terminal.

29. (CURRENTLY AMENDED) A method of selecting application programs of a portable terminal using the portable terminal, comprising:

determining a location of the portable terminal and an application program of the portable terminal ~~used for executing a first set of procedures in accordance with a function during~~ implementation of a first set of procedures; and

modifying the application program and information with respect to the function of the terminal ~~for executing subsequent to detection of a second set of procedures based on the location detected using the portable terminal, where the first set and the second set of~~ procedures include displaying the application program of the portable terminal in a manner useable by a user.
